## What is Sugatsune's "Motion Design Tech"?

**With technology**

**Motion Design Tech is Sugatsune's unique product concept to provide specialist movement solutions for your flaps and doors.**

The operability of doors or lids can be improved by choosing from the 5 types of motion suitable for work environment. It can also improve the efficiency of work involving opening and closing movements, increasing the added value of the device and equipment.

So where should they be used separately?  
We will introduce them below one by one.

Motion Design Tech Lab (Development laboratory)

Mr. ISHIGAYA, researcher

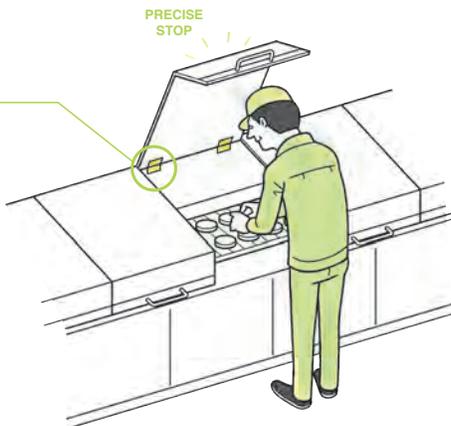

# Hold in any position Free Stop Motion

It can hold the door, lid or cover in any position during operation.

### Applicable Places

Torque Hinge, HG-TS

Ideal for top-opening covers in a production line, as it allows for the cover to be held open in any position. Because no stopper is necessary, speedy checks and maintenance is possible.

No stay is needed, clearing additional space inside the machine.

Users don't have to worry about slamming the lid closed, bringing additional safety and ensuring it remains damage-free.

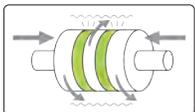

Torque Hinge, HG-TB

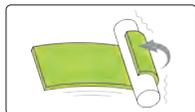

Suitable for displays of airplane seats. Enables a monitor to be adjusted to a level of adults or children's eyes.

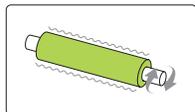

### Stops by means of friction

**Disk Structure**  
Friction occurs when rotating the movable disks with the fixed disk inserted between them.

**Curl Structure**  
Friction occurs when rotating the shaft with the leaf spring twined on it.

**Pipe Structure**  
A shaft press-fitted into a plastic pipe is rotated.

# For smooth movement Soft Motion

Reduces the opening/closing speed of doors, lids or drawers.

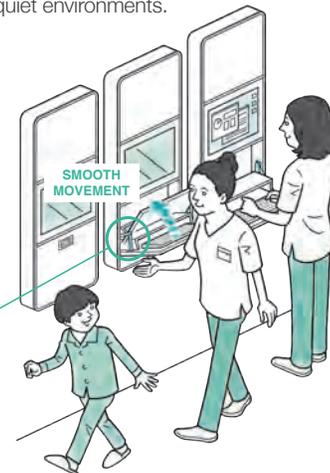

### Applicable Places

This is ideal for wall-storage or information terminals in hospitals.

Once used and the flap is lightly pushed up, it will slowly and naturally close. This is a perfect solution for quiet environments.

Self-close Stay, HDS-10S

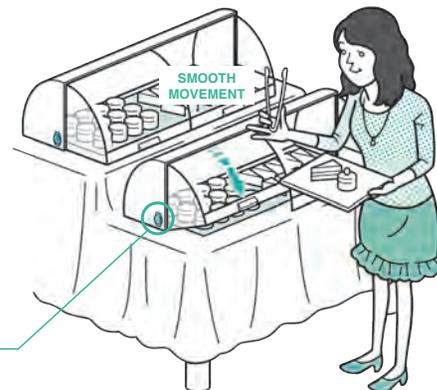

This is suitable for food display cases such as self-serve bakery cases and candy or sweet cases, etc.

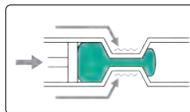

If the flap is pushed down slightly, it will close naturally and slowly by itself. (It isn't necessary to hold the flap until it closes completely)

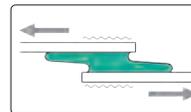

Disk Damper, UDD

### Reduces speed by means of resistance

**Orifice Structure**  
Resistance develops when a viscous medium flows from a thick diameter to a thin diameter.

**Shear Structure**  
Resistance develops when moving the two plates with the viscous medium between.

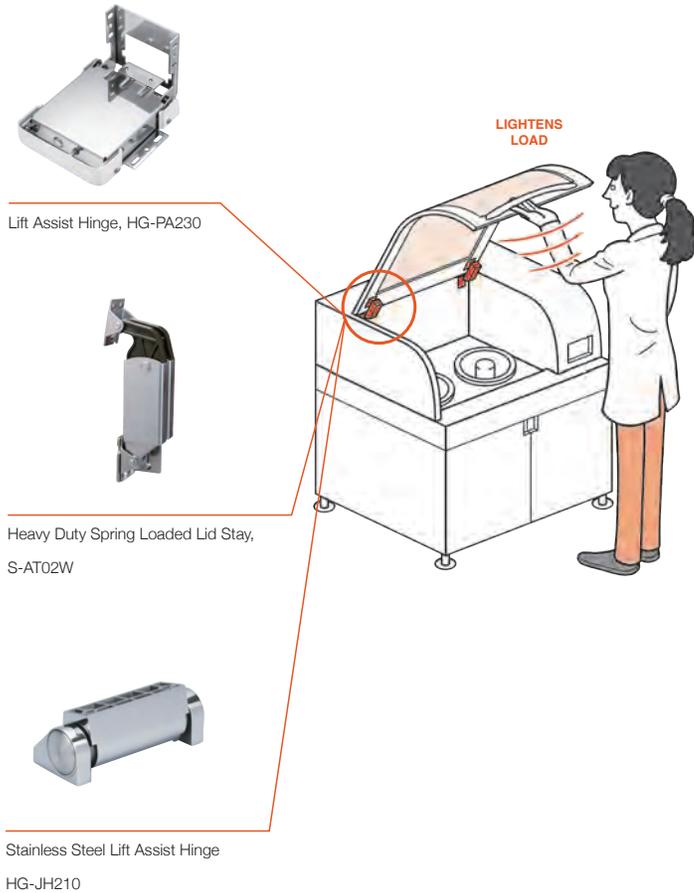

"Lapcon" refers to Sugatsune's patented damper mechanism using left structures.

## Helps you open Power Assist Motion

Assists in opening/closing heavy doors, lids or covers.

### Applicable Places

Lift Assist Hinge, HG-PA230

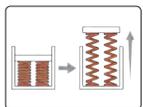

Heavy Duty Spring Loaded Lid Stay,  
S-AT02W

Stainless Steel Lift Assist Hinge  
HG-JH210

Ideal for a large sized analyzing device and enables a heavy flap to be opened using little power.

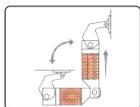

Anyone can easily handle it with one hand - neither the opening nor closing operation will burden users.

### Lifts by means of reaction force

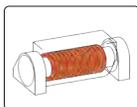

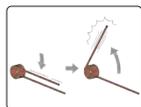

Compression Spring

Reaction force is generated when the shrunken spring returns to its original shape.

Torsion Spring

Reaction force is generated when the curled spring returns to its original shape.

Easy and fine operation can be achieved by using a spring suitable for the application.

## Snap and stop Click Motion

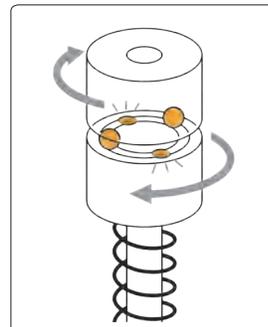

Temporarily holds door, lid or cover during opening/closing at a certain angle with a unique feel.

### Applicable Places

Ideal for a measuring device in a laboratory and enables a flap to be held at a certain angle. It also prevents a flap moving freely so users don't have to worry about it knocking down an instrument.

Detent Hinge, HG-MPS2

### Temporarily holds with detent mechanism

When rotating two grooved parts with balls between them, the moving balls will fall into the grooves, realizing temporary holding.

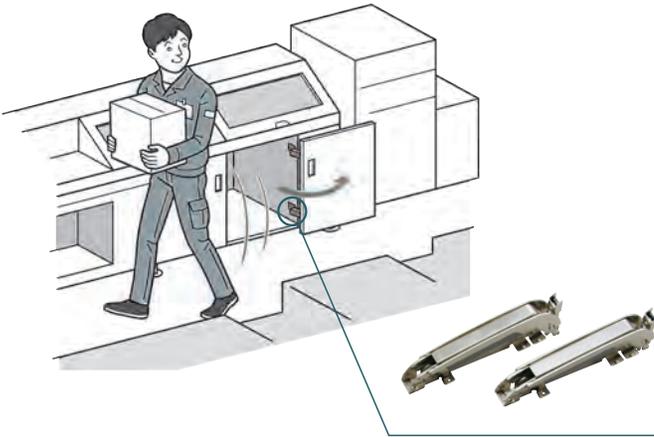

# New openings Unique Motion

Expand variations of opening/closing locus.

### Applicable Places

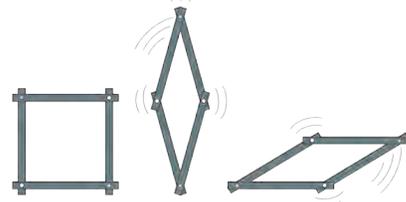

Ideal for large-size machines such as in food processing or printing. It enables a flap to move parallel to a body and decreases the space needed to open the door.

By using this mechanism, an open door will not obstruct narrow corridors in a factory where several machines are operating. The wide opening makes it easier to take something in and out.

MonoFlat LIN-X450 Hinge

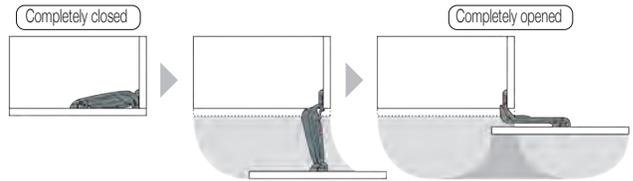

### Moves by using link mechanism

Combining multiple shafts and arms creates more versatile locus than moving with one shaft.

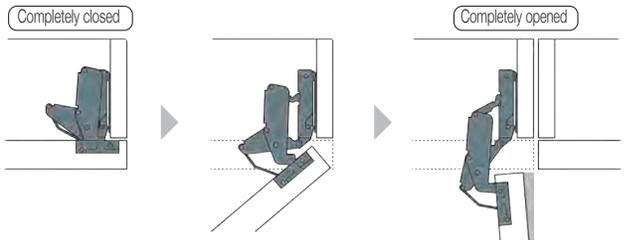

#### Example 1 Locus of MonoFlat LIN-X hinge

Door projection is less than that of common swing doors.

#### Example 2 Locus of concealed hinge

Even for overlay doors, the door hinge side moves inward and will not hit the door next.

One major advantage of "Motion Design Tech" supporting 5 types of motion

## Easy Installation & Adjustment Function

Proper installation is crucial for the performance of industrial components.

Since "Motion Design Tech" is a technology of motion, to further improve that "motion", installation support function is incorporated in various products.

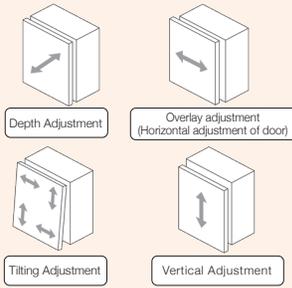

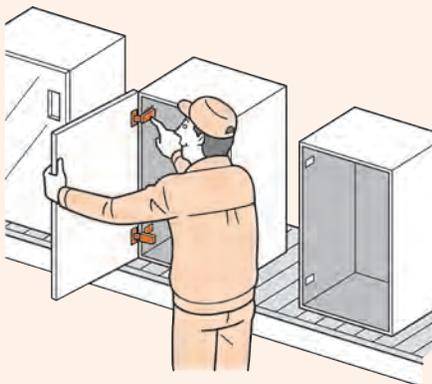

Easy installation and possible door adjustment after installation realises a comfortable fine opening and closing operation.

#### Example of Applicable Products CONCEALED HINGE FOR SHEET METAL HT160THV2

High durability is also proprietary to Sugatsune. Comfortable movement lasts for a long time.

Adjustable in various directions.....

# Torque

## How to Calculate Torque?

Torque is the force required to rotate something along an axis. It can be calculated by measuring the distance of the door or lid from the hinge side to the opposing edge and multiplying that by the weight of the door or lid. Then take the resulting value and divide it by 2.

$$\text{Torque} = (D \times W)/2$$

OR

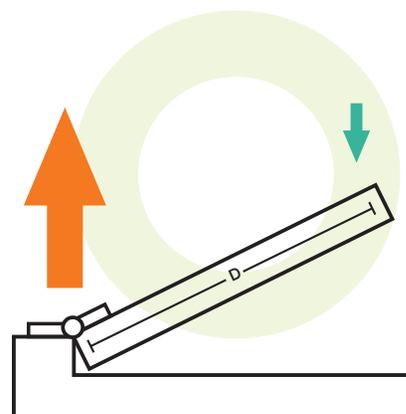

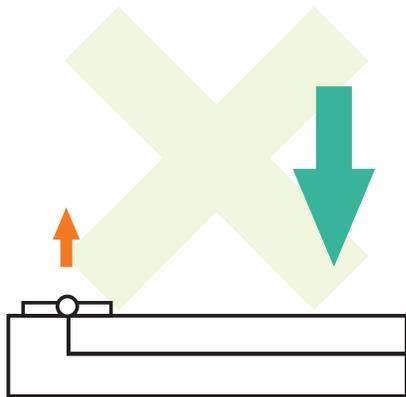

$$\text{Torque} = .5 \times D \times W$$

Where:

D = Measurement of door or lid from hinge to edge.

W = Weight of the door or lid

## Determine The Torque Hinge to Use

Simplified for flat-shaped lids or doors

# Selection of Torque Hinges

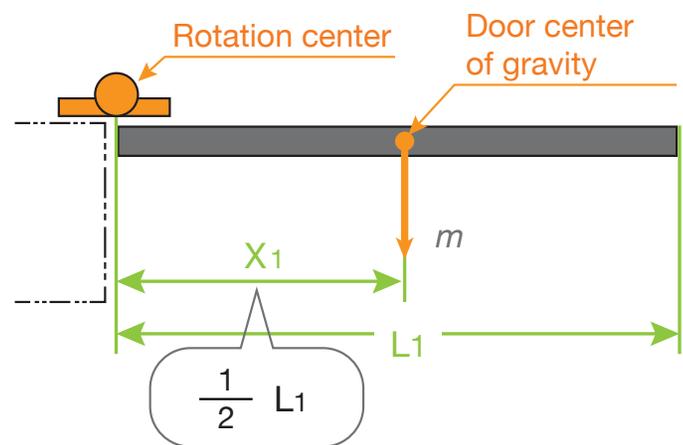

## Formula for Torque Generated by The Door

The torque generated by the door can be calculated from (center of gravity) and (weight) of the door.

**TORQUE**  
generated  
by the door

**DISTANCE** from  
rotation center to door  
center of gravity (m)  $\times$

**WEIGHT**  
(kg) m

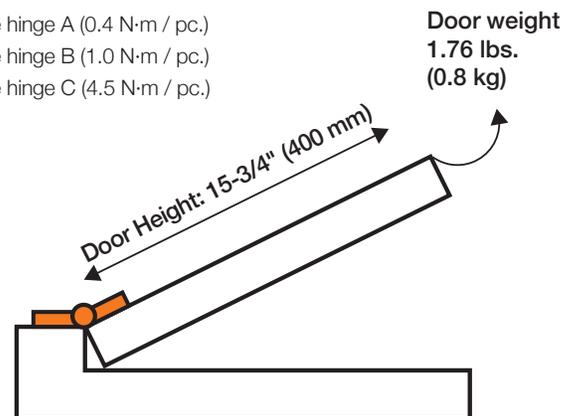

## Example:

When installing two torque hinges as below picture, which one is the most suitable?

(Torque tolerance: 20%)

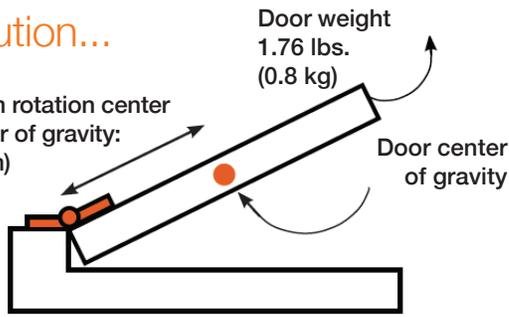

- Torque hinge A (0.4 N·m / pc.)
- Torque hinge B (1.0 N·m / pc.)
- Torque hinge C (4.5 N·m / pc.)

Keep in mind that the formula above assumes that the lid is "flat". In many cases, lids are "L" shaped or have other attributes which need to be taken into consideration in order to find the actual point of the center of gravity. To simplify your effort, we have created a tool that will do the calculations and suggest hinges in our line up that will fit your specific application.

## The Solution...

Distance from rotation center to door center of gravity: 13/16" (20 cm)

The most suitable torque hinge is:

- Torque hinge A (0.4 N·m / pc.)
- Torque hinge B (1.0 N·m / pc.) ←
- Torque hinge C (4.5 N·m / pc.)

## Formula

The torque generated by the door can be calculated as below:

$$\frac{0.2\text{m} \times 0.8 \text{ kgf} \times 9.80665}{\text{N}} = 1.57 \text{ N}\cdot\text{m}$$

The torque generated per hinge is:

$$1.57 \text{ N}\cdot\text{m} \div 2 = 0.79 \text{ N}\cdot\text{m}$$

Torque has to be stronger than 0.79 N·m per hinge.

Considering torque tolerance 20 %, it has to be stronger than 0.95 N·m.

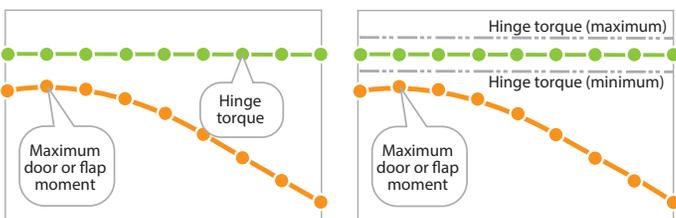

**The answer is: Torque hinge B (1.0 N·m / pc.)**

## Key Point for Selection

Important factors when choosing a torque hinge are the shape, the functions and the moment of the door, flap or cover being manufactured (below, door moment). The free stop function requires conditions in which **the torque of the torque hinge exceeds the maximum door moment.**

When multiple torque hinges are used, the torque of the hinges is equal to **the torque value of each hinge x the number of hinges.** The same principle applies when using a torque stay.

The variance in torque value (tolerance) also needs to be taken into account when selecting a torque hinge. If the tolerance is ±20%, free stop will not occur unless the maximum door or flap moment is lower than the minimum torque value (-20%).

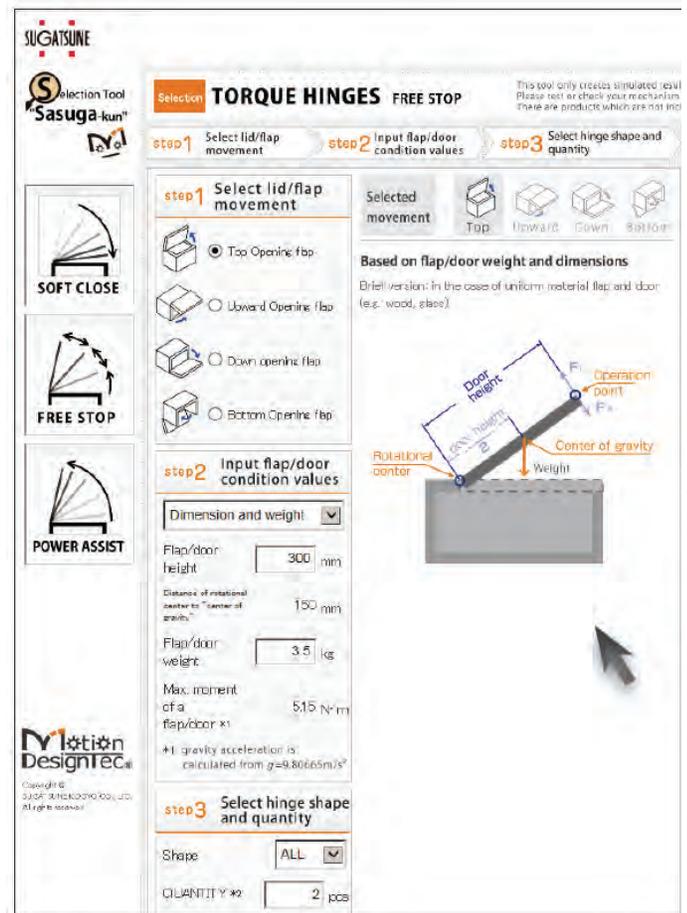

$$\text{Hinge Torque} \geq \text{Door Moment}$$

# BI-DIRECTIONAL ONE-WAY TORQUE HINGE

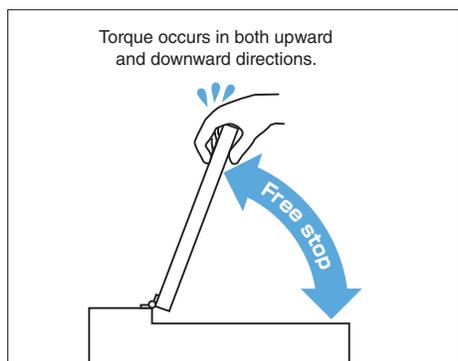

HG-TQW8080

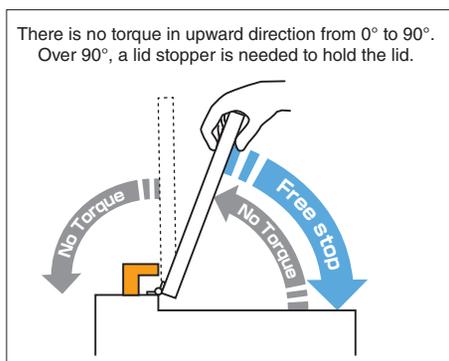

Free-Stop Motion

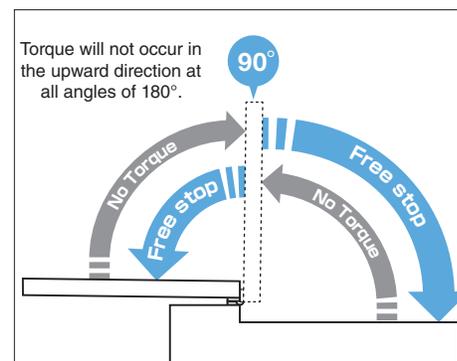

- Generates torque in downward direction only. (Operation range: 0 - 180°)
- The torque direction reverses when the hinge opens at over 90°. This allows a flap to hold in position at all angles of 180° with smooth and light operation.
- Operating temperature: 32°F - 104°F (0°C - 40°C).
- Ideal for medical equipment, factory automation equipment, office automation equipment, workstation monitors.

# 1-WAY CONCEALED TORQUE HINGE

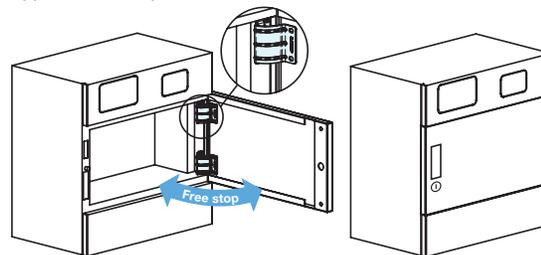

# HG-TQU15

Free-Stop Motion

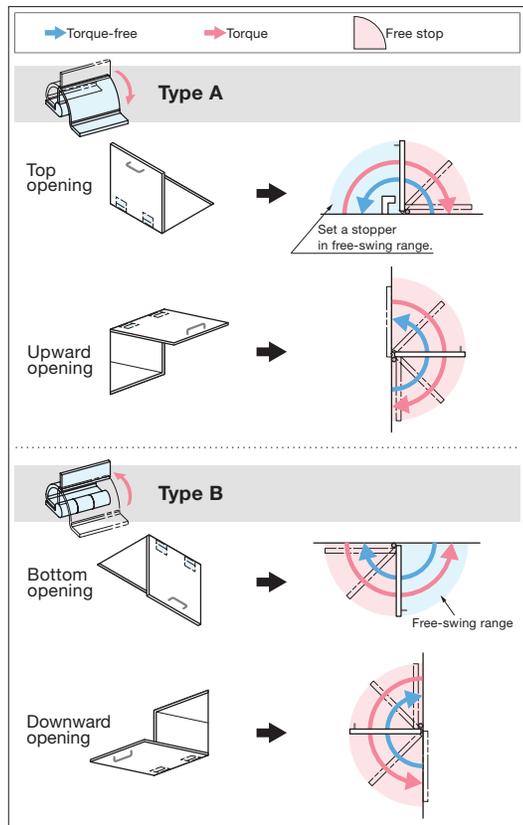

- Two options for torque direction:
  - Type A: has torque (free stop) in opening direction.
  - Type B: has torque (free stop) in closing direction.
- Allows for frictionless handling of doors in opposite direction of torque.
- Concealed hinge avoids tampering or exposure to external elements.
- Hinge is hidden (concealed) from the outside of the door.
- Can be used horizontally or vertically.
- Install a catch or latch to keep lids or doors from opening.
- Durability: successfully passed 20,000 open/close private cycle test.
- Ideal for medical or analytical equipment, automation devices, maintenance on various manufacturing equipment.

## (Unbalanced Load Type)

- High rigidity swivel torque hinge supports unbalanced loads in a hanging installation.
- Hinge can be installed vertically or horizontally.
- Can rotate 360° and be held at any angle (free stop).
- Rotation angle can be controlled with a supplied angle control bolt.
- Center hole for easy cable management (2" opening diameter).
- Durability: 30,000 open/close cycles passed (private test).

**180° Lift Assist and Free Stop**

- Featuring free stop with lift-assist for lid opening & closing directions (0 ~ 180°), giving full access to the inside of equipment.
- Lift-assist makes lid feel lighter to open and close.
- This compact hinge is designed for external surface mounting on top-opening lids.
- The retaining torque (0 ~ 31 lbs-in) is adjustable with a 3/8" (10 mm) socket or wrench.
- Operating temperature: 32° to 104°F (0° to 40°C).
- Cover (included) provides clean appearance to blend in with aesthetics of machinery.
- Durability: successfully passed 50,000 open/close cycle test (private).
- Ideal for medical, analytical and factory automation equipment.
- See Lid Size Guidelines graph for recommended range of supported lid height and lid weight.

# ONE-WAY TORQUE HINGE (MULTI-DIRECTION)

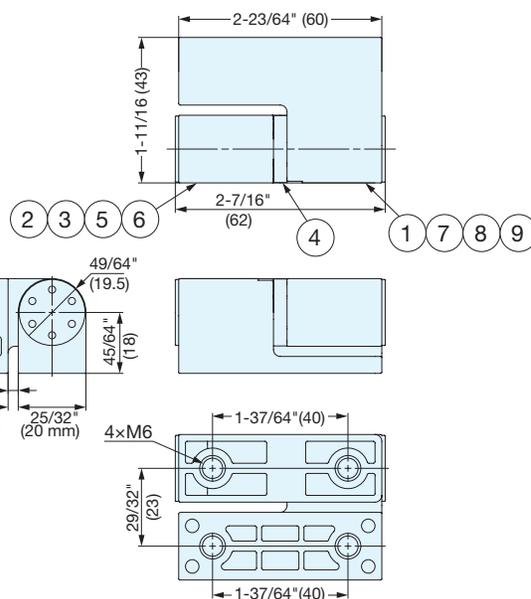

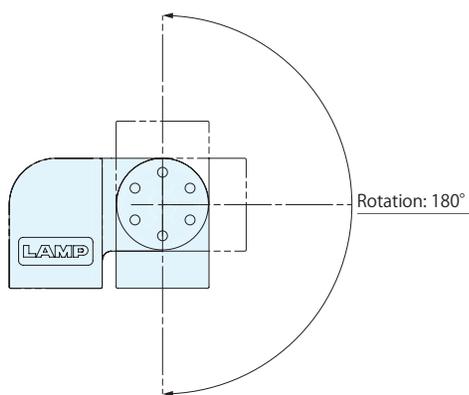

HG-TQM30

Free-Stop Motion

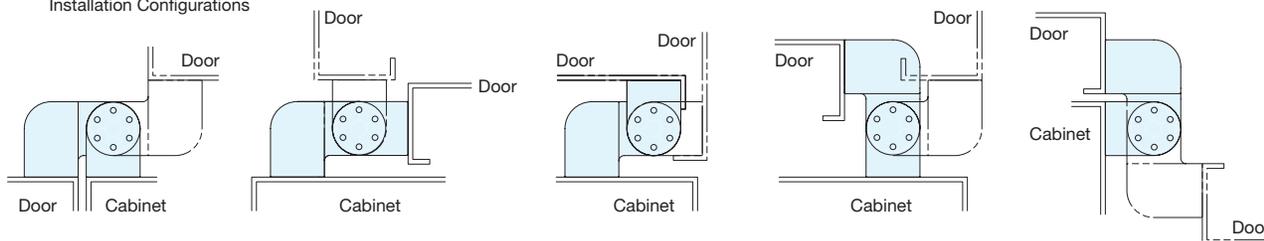

- Free Stop: will stop in place.
- Friction in one direction only: Allows for frictionless handling of the door in the opposite direction.
- Hinges can be used in different situations(ex: Surface mount, Corner mount, concealed mount).
- Back-Mount: There are no screw heads on the surface.

- Monitor can be easily installed and removed.
- Free stops in a range of 180° (swivel) and 40° (tilt).
- Auxiliary lock prevents monitor from sagging due to minute vibration. Also suitable for touch screens.
- Bracket holes are based on VESA standard of 75 mm x 75 mm and 100 mm x 100 mm
- For monitor sizes 12 - 22.9" weighing up to 22 lbs (10 kg)
- Free stop feature allows you to freely tilt and swivel monitors and hold in the desired position.
- Applications: LCD monitors for machine tools, OA equipment, medical equipment, etc.

### How to Install and Remove Monitor

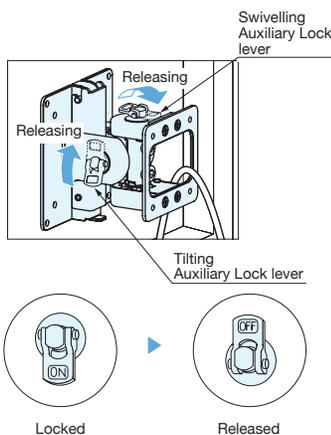

Monitor easily attaches to bracket with slot and click.

To remove the monitor, press the release lever down and tilt the monitor out of the slot.

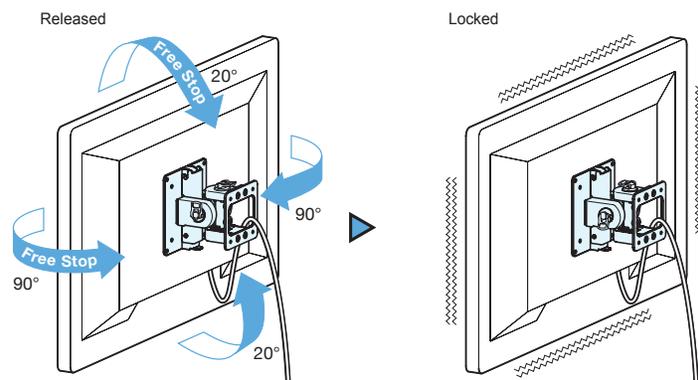

Wire hole allows you to route wires through wire access opening.

### Auxiliary Lock Operation

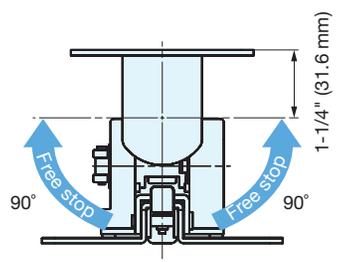

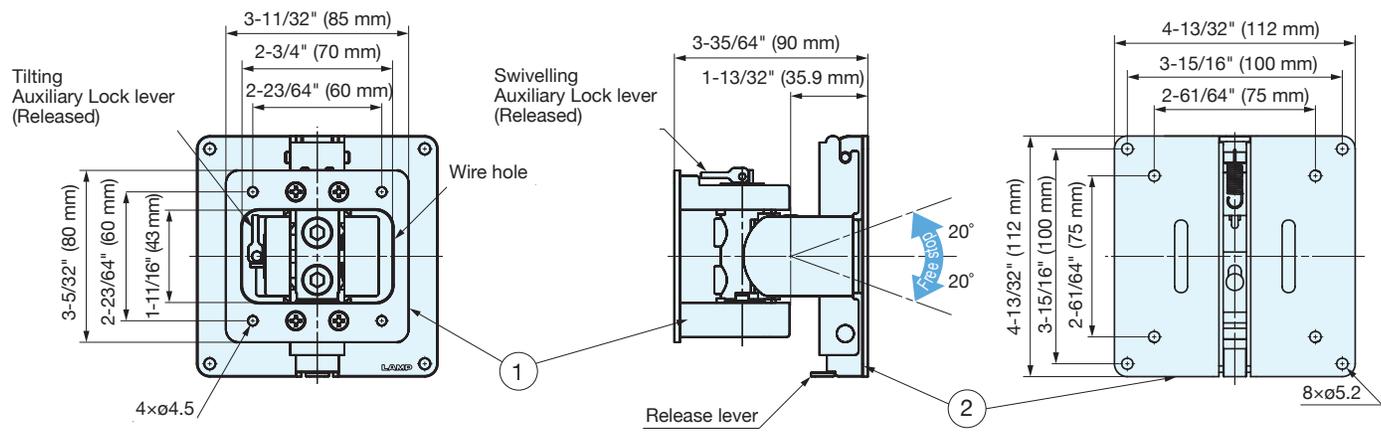

Auxiliary locks hold, tilt and swivel to a secure position. Release the lever to adjust the position.

### How to Adjust Angle

Holds at any angle within 40° up/down tilt  
Holds at any angle within 180° left/ right swivel

Monitor maintains position under vibration

- Robust design holds monitors securely in position.
- Free stop feature allows you to freely tilt and swivel monitors and hold in desired position.
- Features an auxiliary lock mechanism which prevents sagging.
- Auxiliary lock protects monitor from unintended movement.
- VESA (75 mm x 75 mm and 100 mm x 100 mm) compliant standard.
- Supports 12" to 23" monitors weighing up to 22 lbs (10 kg)
- Applications: LCD monitors for machine tools, OA equipment, medical equipment, etc.

### Stable Operation

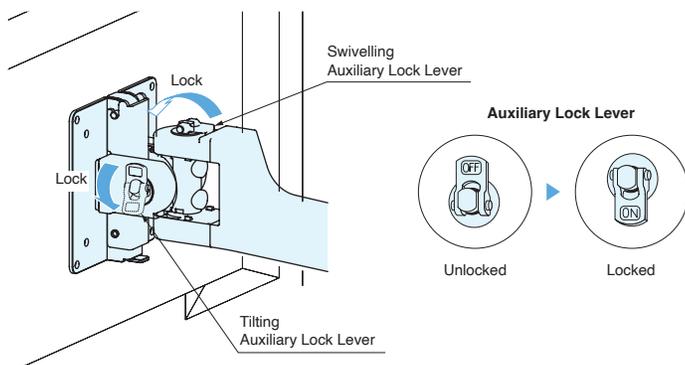

Prevents touch screens from shaking or causing unintentional inputs.

### Rotational Motion

The **optional** rotation bracket allows for free stop in the rotation direction. (Free-stop range: 95° on each side)

### Auxiliary Lock Operation

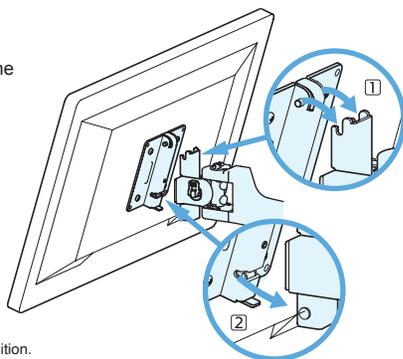

The auxiliary lock temporarily releases to avoid breakage if unintentional heavy load is applied to it.

\*Do not forcibly move monitors when locked.

### Easy to Mount

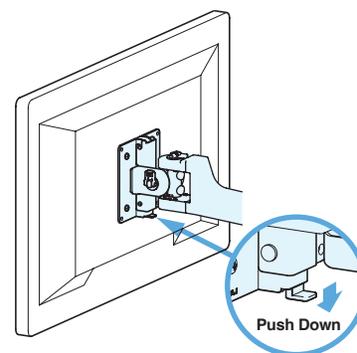

- 1) Fit the protrusion into the groove of the bracket.
- 2) Push the lower part of the mounting plate.

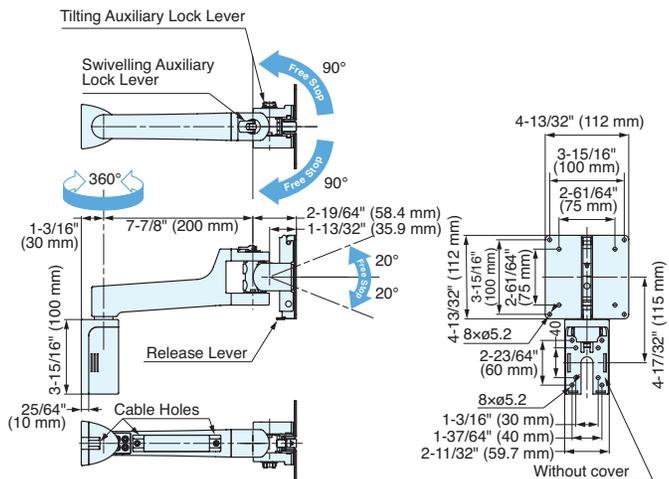

\*Make sure mark is in upward position.

### To Dismount

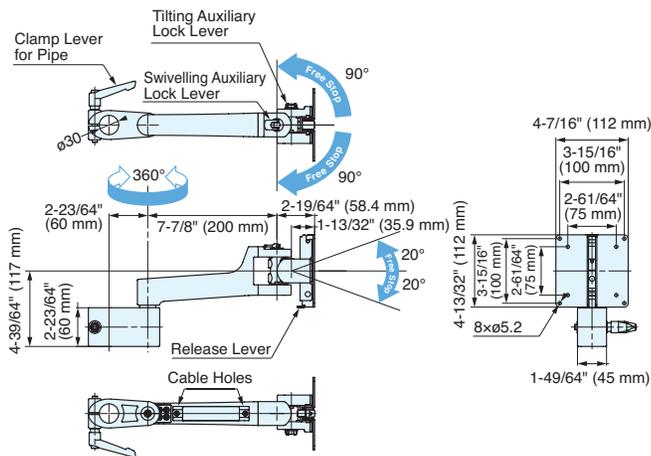

To remove, push down on the release lever and tilt the monitor.

# TORQUE PIANO HINGE

HG-TLS30-50-300

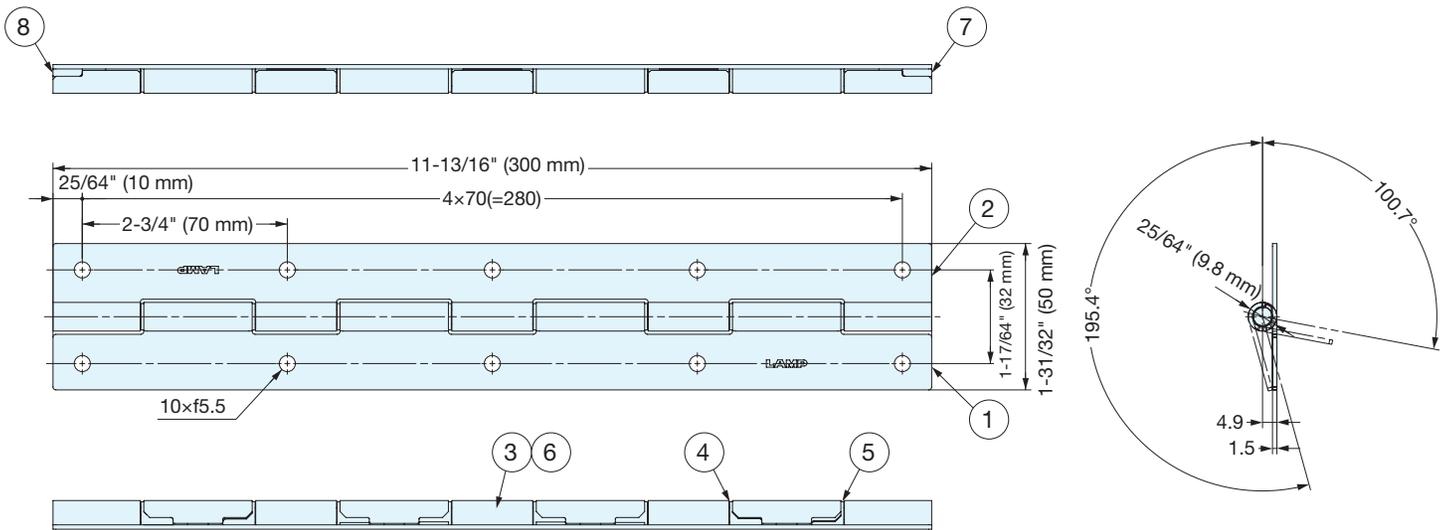

Free-Stop Motion

- Unique long type torque piano hinge.
- Free stop function maintains a safe working environment
- Reduces gaps between housing and doors for industrial equipment and shopfittings to improve security and reduce danger
- Greaseless hinge allows for water-drop level exposure
- Can be used in multiples for doors larger than 12"
- Successfully passed 30,000 private cycle tests for vertical and horizontal applications

For opening/closing of maintenance machine doors.

- A torque hinge that can be opened 180°.
- Shafts do not protrude when hinge is fully opened or closed.
- Easy to operate as the two shafts have different torque and move one at a time.
- Ideal for folding tables in trains, RV, van conversions, etc.

### Application Example

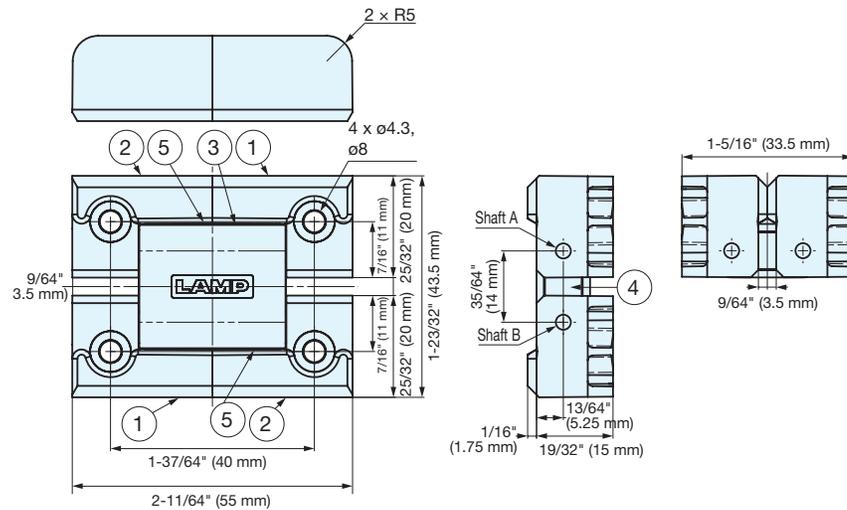

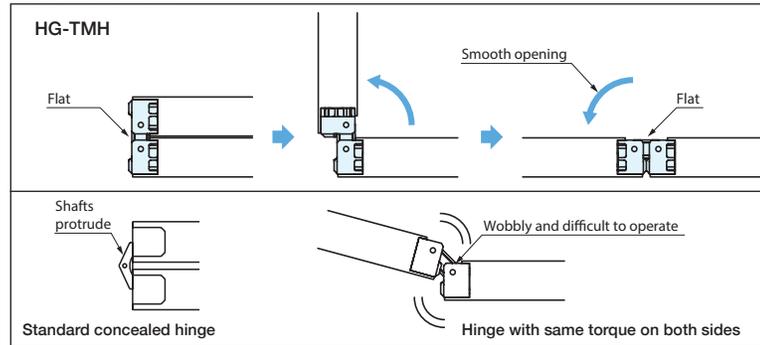

Shown in folded position.

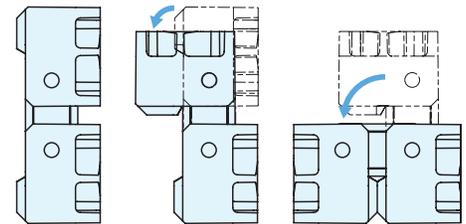

Lays flat so shafts do not protrude.  
No visible screw holes when surface is extended.

## Calculation of maximum door moment (for homogeneous material)

$$T = m \times 9.80665 \times L \times \frac{1}{1000}$$

- T : Max. door torque (N-m)
- m : Door weight (kg)
- L : Distance from rotation centre to door centre of gravity (mm)
- $L = \frac{D}{2} - A + 20$ \*

\* For heterogeneous door (e.g., attached with a mirror), please contact our technical support (support@sugatsune.com) for assistance.

D : Door length (mm)  
A : Bracket installation dimension (mm)

Calculation of maximum door moment

$$T = m \times 9.80665 \times L$$

T: Max. door torque (N/mm)

m: Door weight (kg)

L: Distance from rotation centre to door centre of gravity (mm)

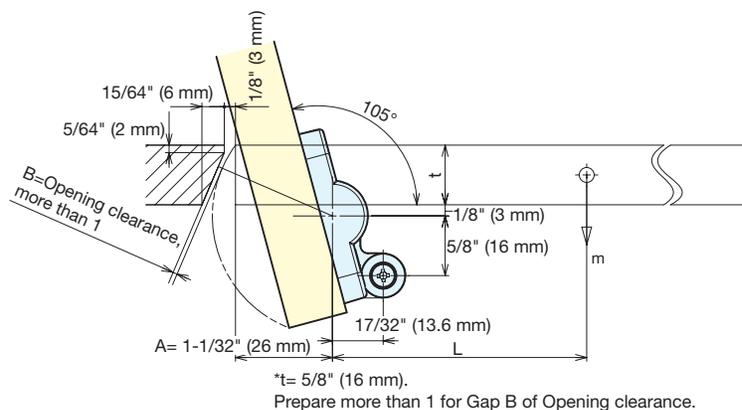

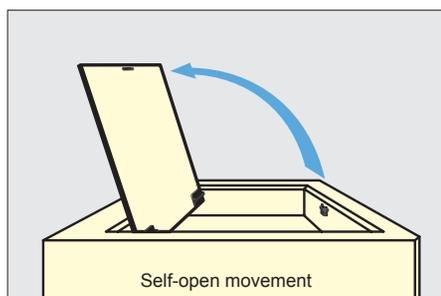

$$L = \frac{D}{2} - A \quad (\text{Formula for assuming that the centre of gravity is in the centre of door})$$

D: Door length (mm)

A: Bracket installation dimension (mm)

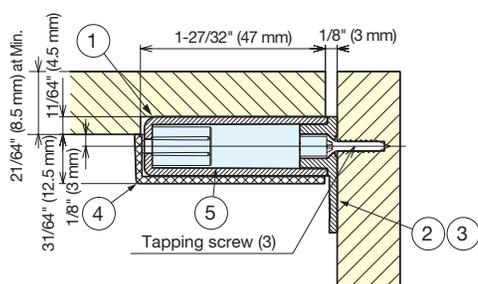

[Example] D=180 mm, A=26 mm, m=0.63kg

$$T = 0.63 \times 9.80665 \times \left( \frac{180}{2} - 26 \right) = 395 (\text{mN} \cdot \text{m}) \\ = 0.395 (\text{N} \cdot \text{m})$$

## Adjustment of Lid Opening Speed

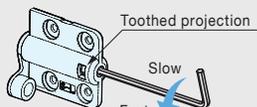

When increasing lid opening speed

1

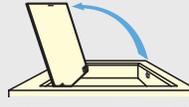

Insert a hex key (size 3) into the hole of spring unit (L side)

2

Push in the hex key until toothed projection is disengaged, while rotating counter clockwise by 30°, and then pull it out.

3

Close the lid, and check if the lid can be opened smoothly. Repeat steps 1-3 (maximum 5 times) if the lid opening speed is still slow.

When decreasing lid opening speed (returning to the speed before adjustment)

Loosen the force following the hex key rotating clockwise.

\*Make sure to rotate counter clockwise following pushing in the hex key and disengaging the projection. Forced rotation may cause damage.

### Moment Formula and Graph

**Door Moment**  $M_t = W \times \frac{L}{2} \times \cos \theta$

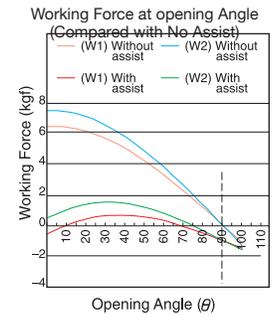

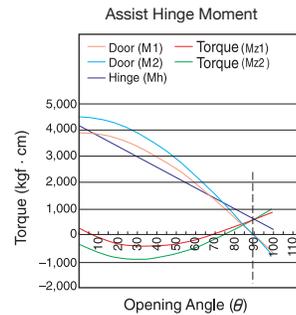

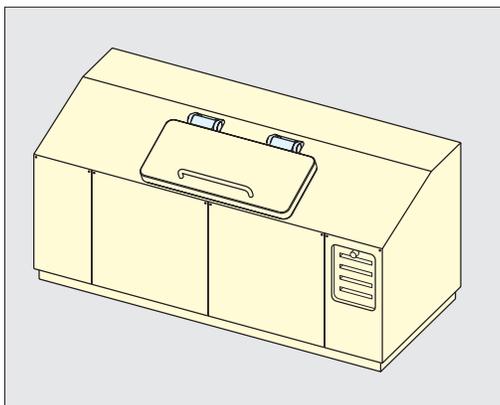

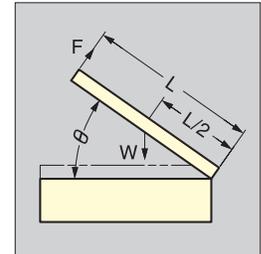

**Hinge Moment**  $M_h = M_m \times (1 - \frac{\theta}{115})$

**Torque to lift door**  $M_z = M_h - M_t$

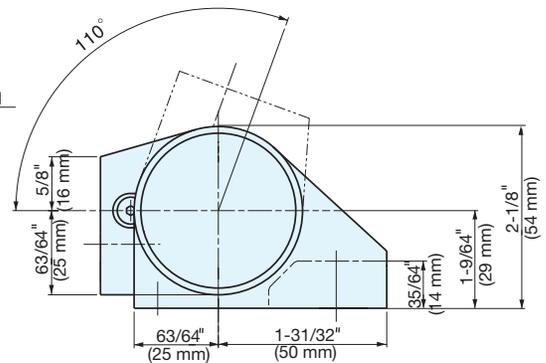

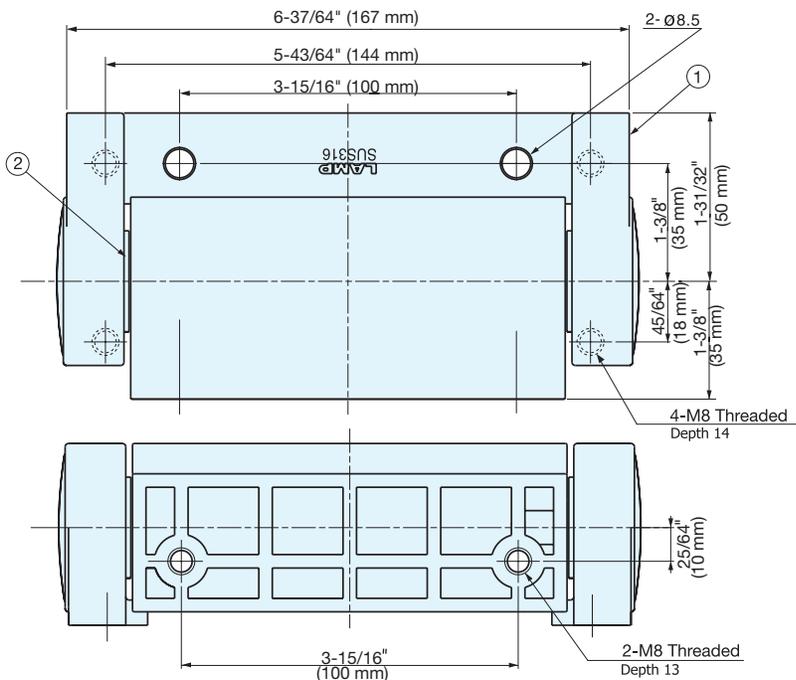

**Force to lift door**  $F = \frac{M_t - M_h}{L}$

W : Door Weight    θ : Opening Angle  
L : Door Length    M<sub>m</sub> : Torque of Assist Hinge

When M<sub>z</sub> is:  
"-" shows closing force. "+" shows opening force.

Door size: Max. W17-23/32" x H27-9/16" x t53/64" (W450 mm x H700 mm x t21 mm)

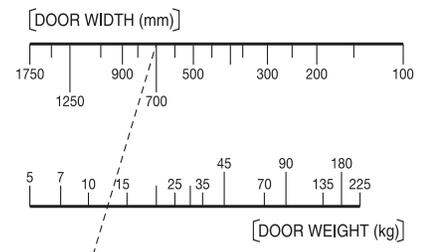

Distance between door edge and hinge must be less than the figures shown in column "X" of the dimension table below.

To determine the number of hinges required for each door:

• Using the chart to the right, locate the correct door width (upper scale) and door weight (lower scale). Draw a line connecting these 2 points to the chart below (point "a"). Then draw a vertical line through the lower chart to find the number and type of hinges required.

• Check door thickness requirements.

Unique Motion

- 3-way adjustability with built-in damper.
- Load capacity: 55 lbs (25 kg)/2 pcs, 88 lbs (40 kg)/3 pcs.
- Maximum door width: 31-1/2" (800 mm)/2 pcs, 35-7/16" (900 mm)/3 pcs.
- Wide-opening hinge allowing 160° opening.
- Successfully passed 50,000 open/close private cycle test.
- Recommended door thickness: 11/16~1-7/16" (18~36 mm).
- Includes mounting plates and screw covers.
- Built in damper allows doors to soft-close.

# CONCEALED HINGE

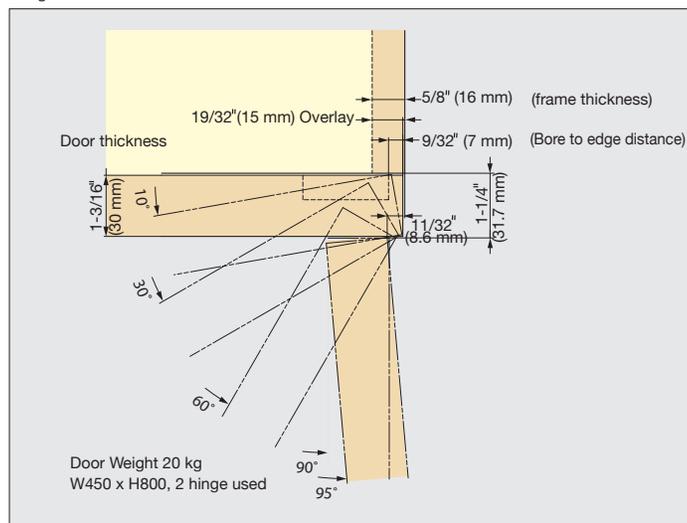

HT-160V2

Unique Motion

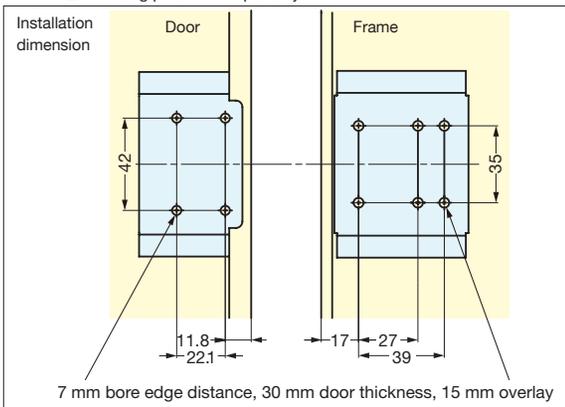

- For use with sheet metal applications.
- Overlay adjustment from 1-3 mm.
- Ideal for when 2 doors are close together.

Range of motion

HT-160TZ mounting plate sold separately

Item No.	Weight (g)	Part Name	Material	Finish
HT-160V2	253	Plate	Zinc Alloy	Nickel
		Body	Steel	
		Spacer	Polyacetal	Black

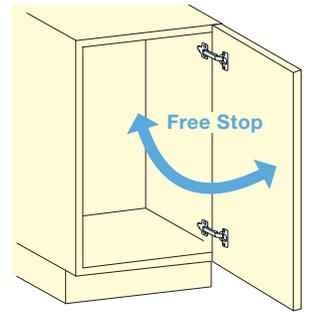

Unique Motion

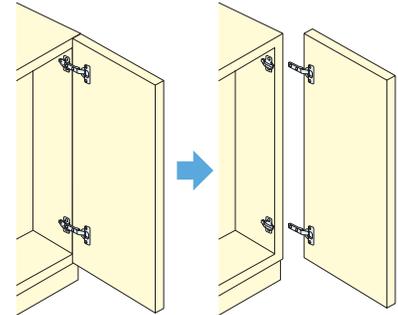

- Torque concealed hinge with free stop holds door open at any position up to 95° opening (prevents slamming).
- Door opens without interfering with side cabinets, wall, or other adjacent objects.
- Ideal for door maintenance in limited spaces: gaming industry, vending machines, kiosks, contiguous swing doors.
- Simple clip-on installation and detachment: hinge can be easily fixed onto the mounting plate by pressing down.
- The safety pin prevents accidental unlocking.
- Durability: 10,000 open/close cycles passed (private test).
- Mounting plate (H95TSZ) sold separately.

### Torque Mechanism

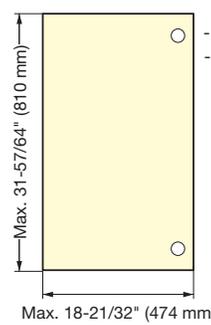

Holds in position even if the door is inclined.

### Easy Installation and Detachment

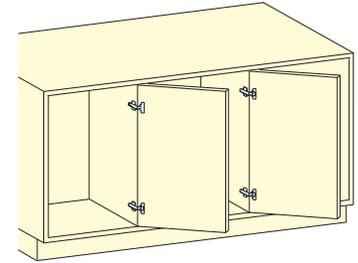

### Example Door Spec

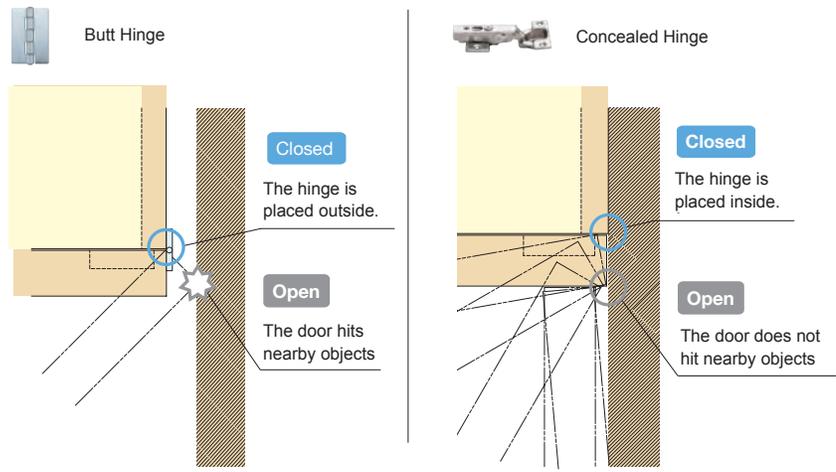

- Height: Max. 31-57/64" (810 mm)
- Width: Max. 18-21/32" (474 mm)
- Thickness: Max. 3-5/8" (92 mm)
- Weight: Max. 44 lbs. (20 kg)
- \* 2 hinges used with 2 mounting plates

### Alternative Installations

Can be used on doors lined up side by side.

### Door Locus Comparison

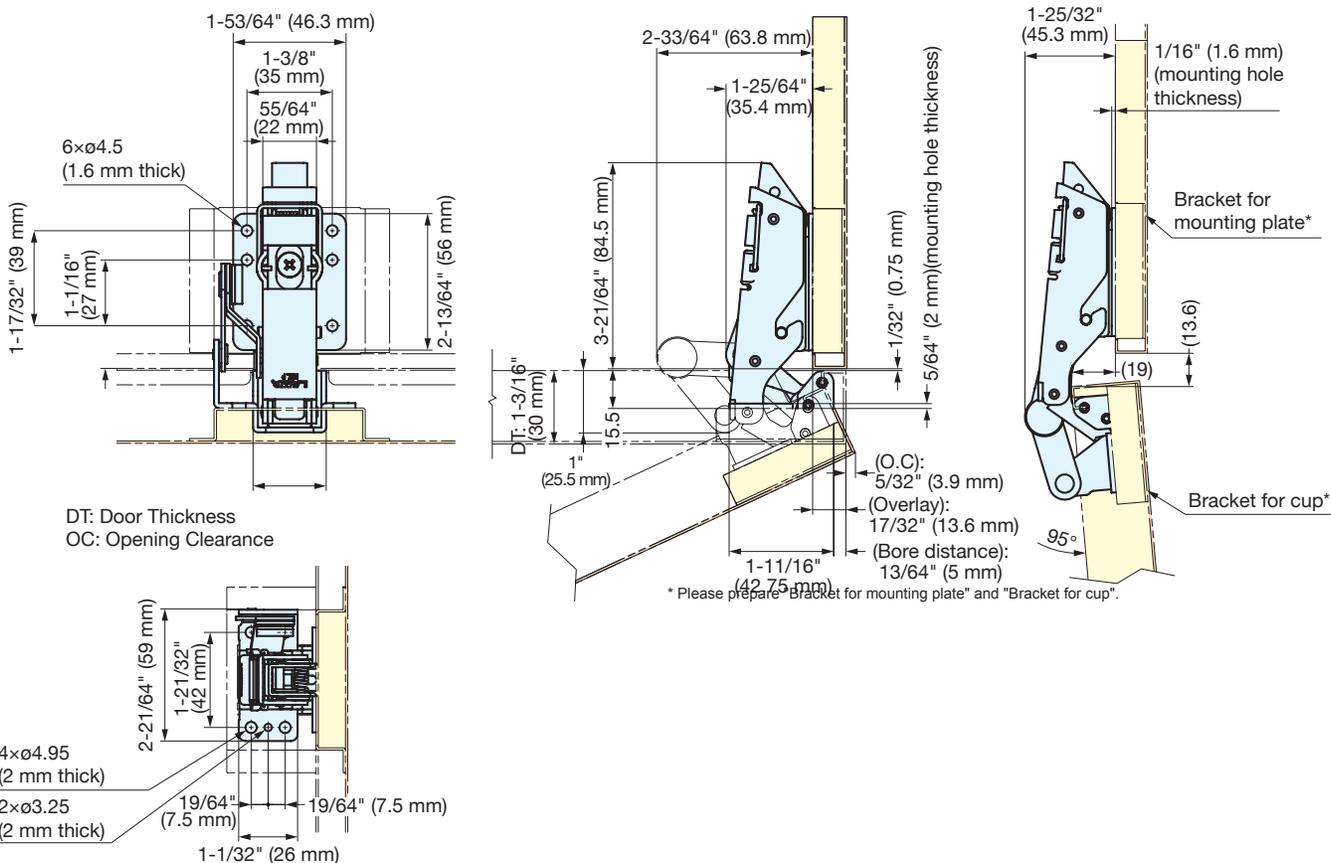

### Torque Graph

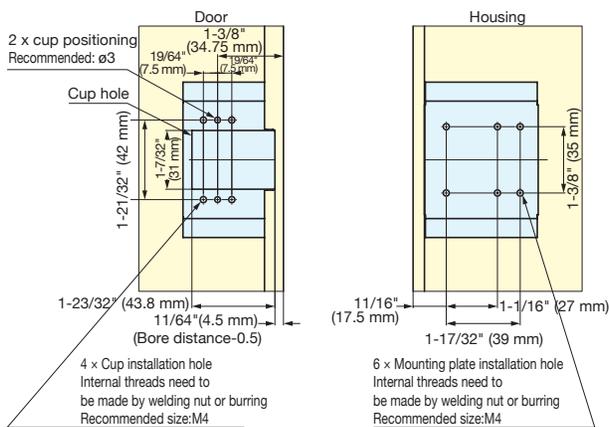

Although the torque will be released to prevent "spring-back" at a nearly closed angle, the door will not be firmly kept closed. If detent function is needed, please use with catches.

### Changes in Torque Strength

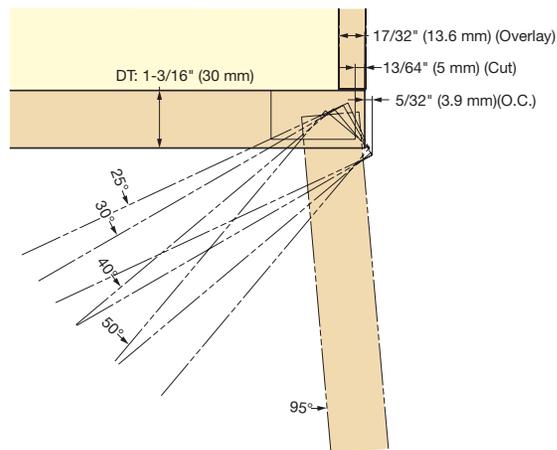

- 4.4 lbs-in at 0° opening angle
- 31 lbs-in at 20° to 25° opening angle
- 17.7 lbs-in at max 95° opening angle

How to select components such as Lapcon stays and torque hinges?

# Sasuga-kun can address such concerns!!

There are lots of products  
Which one is suitable?

Wow, it's already this time!!  
I want to inquire but the business  
hours are over :

I would like to close doors  
slowly  
and stop it exactly but :

Give it a **TRY!**

**Selection Tool "Sasuga-kun"**

## What is... Sasuga-kun

It's a web-based tool that can automatically calculate the torque required and select <sup>(※)</sup> suitable hinges, stays and other products, simply by entering the movement, size, weight and centre of gravity of a door.

※For some products, there is also a simulation tool that can check the movement of a door by displaying a graph instead of selection.  
The selection is the result of calculation and for reference only. Be sure to confirm by real equipment or test machine before making a use decision.

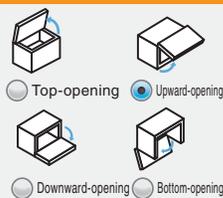

### 1 Select kind of movement

### 2 Input conditions

#### step 1 Select lid/flap movement

#### step 2 Input lid/flap conditions

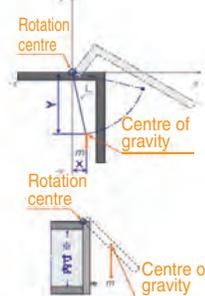

Based on lid/flap centre of gravity and weight

Input dimensions with lid/flap closed.

X-coordinate  mm  
Y-coordinate  mm  
Lid/flap weight  kg  
Inside height  mm  
Maximum lid/flap moment<sup>※1</sup>  N·m

※1 Calculated with acceleration of gravity  $g=9.80665$  m/s<sup>2</sup>

Based on lid/flap centre of gravity and weight

#### step 3 Select shape and qty

Shape   
Qty<sup>※2</sup>  pc(s)/per door

※2 Stay: 1 pc or 2 pcs recommended  
Hinge: 2 pcs recommended
